

ACTION

VIBRATORY EQUIPMENT

***Designed & Manufactured
to Make a Difference***

VIBRA-SNAP® Screen

The VIBRA-SNAP® Screen is an effective alternative to conventional rigid deck screeners for the efficient processing of difficult materials. It is ideally suited for screening of moist, sticky, fibrous, wet, bulk materials with a high percentage of fines or near size particles. Flexible polyurethane screens are tensioned and relaxed to generate high material accelerations via ACTION's patented polyurethane screen mat geometry and connection system. Single and multi-deck options are available.

TAPER-SLOT® Screen

The innovative long stroke TAPER-SLOT® Screen is designed to excel in challenging applications that conventional screens cannot handle. It is ideally suited for non-uniform and difficult to screen bulk materials.

SUB-PAN FREE™ TAPER-SLOT® Screen

The SUB-PAN FREE™ TAPER-SLOT® Screen is the right choice for sticky applications, eliminating material build-up, wear, and sub-pan maintenance. Without a sub-pan the screened fractions discharge directly into a bunker or onto a take-away belt below.

DENSE-OUT® Vibratory AIR Separator

The DENSE-OUT® is a dry classification tool that uses vibration to stratify and air to separate bulk materials based primarily on differences in density. The DENSE-OUT® helps produce cleaner and more valuable products. Single, double, or triple air knife models are available to suit your separation needs.

SUB-PAN FREE™ TAPER-SLOT® Screen DENSE-OUT® Combo

The multi-functional SUB-PAN FREE™ TAPER-SLOT® Screen DENSE-OUT® Combo saves valuable space. It provides two processes in a single machine with screening and density separation for up to three fractions.

VIBRATORY CONVEYORS

ACTION's natural frequency vibratory conveyors are made to order for the efficient transport of bulk materials in a wide range of widths and lengths to suit the application. Process features such as screens, metal detectors, dividers, skirts, custom spouts, multiple discharge points, varying widths, hoods, and liners can be integrated to suit the application.

VIBRATORY FEEDERS

ACTION offers a wide range of performance-proven vibratory feeders. Like all ACTION vibratory equipment, each feeder is engineered with appropriate stroke, R.P.M., and declination for efficient conveying and metering of bulk materials. Mating hoppers, gates, screen sections, distribution domes, and other features can be integrated.

MAG-SORT® Metal Re-Claimer

The patented MAG-SORT® reclaims valuable ferrous materials via the use of suspended in-line magnetic separators in conjunction with an underlying multi-deck vibrating conveyor. Single, double, and triple magnet designs are available with product discharges to suit.

VIBRA-DISCHARGER®

The VIBRA-DISCHARGER® is a high-capacity vibratory feeder for the activating, metering, and feeding of granular bulk materials from hoppers, bins, and silos. Materials discharge vertically to a take-away conveyor below with symmetrical product distribution.

STRUCTURAL STEEL SUPPORTS

ACTION has been involved with hundreds of installations and is available to assist with structural steel support design and/or manufacture.

Since inception in 1972, ACTION has been dedicated to the design, manufacture, and installation of vibratory equipment for the efficient processing of bulk materials. ACTION's comprehensive line of vibratory process equipment can be found in sawmills, foundries, quarries, scrap metal processing yards, and a wide range of recycling facilities in 33 countries. ACTION is known for its innovative vibratory products, common-sense engineering solutions, unwavering equipment reliability, and responsive customer service. We invite you to discover ACTION's uncompromising commitment to excellence.

Employee Owned Since 2021

Common applications:

- Sawmills / Wood Products
- Construction & Demolition (C&D)
- Foundry
- Scrap Tires
- Landfill Reclamation
- Compost
- Auto Shredder Residue (ASR)
- Wood Waste
- Aggregate & Dirt
- Commingled Recyclables
- Municipal Solid Waste (MSW)
- Commercial Waste
- Metal Processing
- Glass, Plastics, & Metal
- Refuse Derived Fuel (RDF)
- Electronic Waste (E-Scrap)
- Bio-Solids
- Food Scraps & Organic Material
